# Installing a printer driver
in Windows Vista

In Control Panel,
select "Printers".

Select "Add Printer".

Select "Add a Local Printer".

Select "Use an existing port" and choose "FILE: (Print to File)" from the pull-down menu, then click "Next".
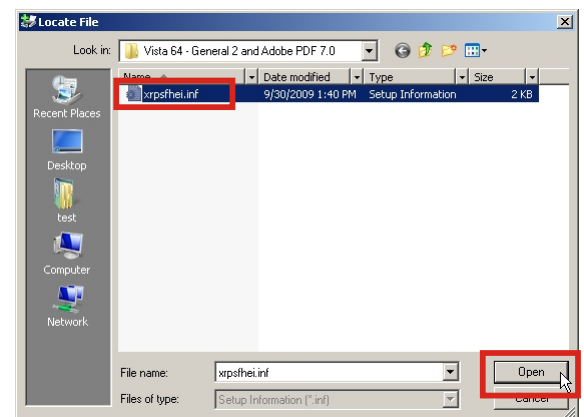

Click "Have Disk...".

Click "Browse...".

Browse to the location of xrpsfhei.inf which can be found in the folder into which you extracted the contents of the zip file, then click "Open".
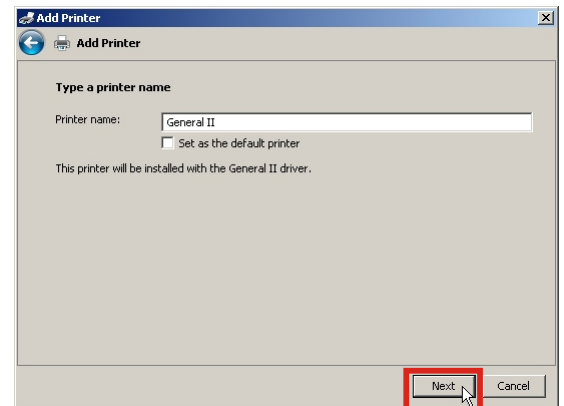

Click "OK".

Select the appropriate printer.
For colour, choose "Adobe PDF 7.0"
(Note that this will create Postscript
files as opposed to PDF files) or for
black and white, choose "General II".

Click "Next".

You may see a security warning
stating that the publisher of the
driver could not be verified. Just
click "Install this driver software
anyway".

Click "Next".

Click "Finish".
